

Coffee Sales Trend and Time-Based Performance Analysis for Afficionado Coffee Roasters

Anushka Das

Abstract

This paper presents a business intelligence analysis of coffee shop sales data using Python, Pandas, Plotly and Streamlit to identify sales trends, store performance and product performance.

Keywords

Business Intelligence, Data Analytics, Coffee Sales, Streamlit, Plotly

Introduction

The project analyzes coffee shop transaction data and develops an interactive dashboard for business decision-making.

Objectives

Analyze revenue trends, store performance, customer behavior and product performance.

Dataset Description

Dataset contains transaction quantity, store location, transaction time, product information and revenue.

Methodology

Data preprocessing, feature engineering, exploratory data analysis and dashboard development.

Results

Revenue peaked between 8 AM and 10 AM. Coffee and Tea generated the highest revenue. Store performance was consistent across locations.

Business Recommendations

Increase staffing during morning rush hours, optimize inventory planning and introduce evening promotions.

Conclusion

Business intelligence techniques successfully transformed transactional data into actionable insights.
